

# Early Protection Programme (EPP)

is a good time to start

**Early Detection and today is a good time to start.**

**Your pet can't talk and often shows no signs when something is wrong. So how do you know?**

Early Detection is not one test, a series of tests or just one visit. It's a new way of caring for your pet, just like human medicine allows us to care for ourselves. Medical advancements enable your doctor to diagnose potential diseases before they become a serious issue including heart worm, thyroid disease and intestinal parasites. With today's medical testing and technology, you can protect your pets like never before.

By following our simple program, many diseases can be caught early depending on the age of your pet. Catching a disease early can make all the difference, adding years to your pet's life.

**Take The Programme ! If you checked off any of the conditions listed below**

- |  |  |
|--|--|
| <input type="checkbox"/> Bad Breath or drooling                    | <input type="checkbox"/> Coughing  |
| <input type="checkbox"/> Change in activity level                  | <input type="checkbox"/> Heavy or rapid breathing at rest                              |
| <input type="checkbox"/> Change in appetite or weight              | <input type="checkbox"/> Incontinence  |
| <input type="checkbox"/> Change in attitude or responsiveness      | <input type="checkbox"/> Lethargy or depression  |
| <input type="checkbox"/> Change in sleep patterns                  | <input type="checkbox"/> Lumps or bumps on or under the skin                           |
| <input type="checkbox"/> Change in urination (amount or frequency) | <input type="checkbox"/> Noticeable decrease in vision (e.g., bumping in furniture)    |
| <input type="checkbox"/> Change in water consumption               | <input type="checkbox"/> Shaking head (on and off, continuously)                       |
| <input type="checkbox"/> Confusion or disorientation               | <input type="checkbox"/> Sneezing  |
| <input type="checkbox"/> Constipation, diarrhea, or vomiting       | <input type="checkbox"/> Stiffness (e.g., trouble jumping, climbing stairs or walking) |

## Did You Know

- **If detected early 75% of common diseases in dogs and 63% of common diseases in cats can be prevented by dietary modifications alone over a one-year period.**
- **Kidney disease is one of the major causes of illness and death in dogs and cats, but symptoms do not usually appear until 2/3 of kidney function has been lost. If caught early, the animal can live with this condition for many years.**
- **If a liver problem is detected at early stage of disease and is administered proper treatment, the chance of your pet's recovery is in your favor.**
- **Early detection of diabetes is extremely important because an early therapy regimen can be more effective and easier on the animal. Detecting and monitoring diabetes early can also prevent damage to other organs.**
